

Anatomy

(Physical Difference Between the Alkebulan and Caucasian People)

Alkebulan

- 1) Melanin-high content.
 - Increase color absorption in eyes
 - Increase sound absorption in ears
 - Acts as a polymer.
 - Converts energy
 - Act as a computer
 - Control cyclical rhythms of all organs
 - Control sleep
 - Controls growth (Rate of Puberty)
 - Reacts to gravity (Electromagnetic forces)
- 2) Skin Melanin (Dark Pigmentation)
 - Allow protection from the sun's ultraviolet rays
 - Allows protection from extreme hot and cold temperatures
- 3) Buttock (Stetobygia) high muscular development.
 - Allows extensive hip and thigh movements
- 4) Legs
 - Longer in proportion to upper body
 - Allow better movement for walking and running
- 5) Blood
 - When heated (burnt) forms complex pyramids
 - Allows better storage and transmitting of energy
- 6) Liver
 - Allows increased cleansing and energy storage
- 7) Hair
 - Least amount of body hair caused by heat insulating effects of melanin

Caucasian

- 1) Least amount causing albinism.
- 2) Albinism
- 3) Flat
- 4) Short
- 5) Less pyramid
- 6) Slightly smaller
- 7) Predominantly hairy

Anatomy

(Physical Difference Between the Alkebulan and Caucasian People)

Alkebulan

- 8) Hair Type
- Curly and brown
 - Allows quicker transmission receiving of electrical and magnetic energy similar to an antenna.
- 9) Eyes
- Farther apart
 - Allows increase field of vision (peripheral)
- 10) Eyes are brown
- Due to Melanin content
 - Allows better reception of Sun's color light heat which results in higher stimulation of pineal and pituitary glands
 - Absorbs full color, see true color
- 11) Nose
- Broad and flat
 - Allows angular contour to air columns causing it to vibrate at higher frequency. Thus, stimulating electromagnetic energy.
 - Allows wider field of vision for each individual eye
- 12) Women's physique has a "T" shape similar to men, broad shoulder fossils indicates superior muscular structure.
- Allows more independent muscular movements and counterbalance for hips and pregnancy weight
- 13) Nerves
- High melanin content in nerve messages to travel faster and protects against dis-ease
- 14) Jaw
- Wider arch
 - Indicates diet high in vegetables

Caucasian

- 8) Flat and Limp, Weak antennas
- 9) Closer together, narrow fields of vision
- 10) Albinoism causes eyes to be many colors
- See Paler colors
- 11) Raised chiseled bridge blocks field of vision and separates and divides images, limited field of vision
- 12) No "T" shape, narrow shoulders, hips wider than shoulders, no counterbalance
- 13) No melanin
- 14) Narrow
- Similar to flesh eating animals

Anatomy

(Physical Difference Between the Alkebulan and Caucasian People)

Alkebulan

Caucasian

15) Arms

- Longer in proportion to body
- Allows better counter balancing

15) Short

16) Lips

- Thick
- Allows wider face muscular field and better extraction of juices from plants

16) Thin

17) Voice

- Wider range of speech
- Allows melodious and rhythmical speech

17) Limited range flat speech, no rhythm, lack melodious sounds

18) Ears

- Allows better center of sounds
- Fluid different in weight inside air

18) Large
- Can move them

19) Stomach

- Flora (Fungi, Yeast, virus and bacteria that live in the stomach and entire digestive tract. Also, it resides in uterus, vagina, eyes, ears, etc.
- Is specific and unique only to blacks, have slightly more than 3 pounds
- Allows food to be broken down (metabolized) at a greater nutritional level

19) No vast variety, limits food metabolism

20) Vagina Lips

- Large
- Allows tighter seal and increases flora lifespan

20) Smaller

21) Vaginal Shift

- Longer
- Allows increased muscular activity

21) Short

22) Penis

- Length slightly longer

22) Shorter

23) Skull

23) Round

Anatomy

(Physical Difference Between the Alkebulan and Caucasian People)

Alkebulan

Caucasian

- Sagittal contour flat (top of head)

24) Face
- Height low

24) High

25) Eye
- Orbital opening rectangular

25) Angular

26) Nasal
- Opening wide (nose)

26) Narrow

27) Lower nasal margin wide base

27) Sharp

28) Facial profile
- Downward slant

28) Straight, no slant

29) Palate Shape
- Wide

29) Narrow

30) Skin
- Absorb greatest percentage of colors

30) Reflect colors

31) Color
- Eyes darken with age

31) Extremely rare

32) Sacral Spot (Birthmark on lower back and/or buttocks)

32) Extremely rare

33) Breath
- Deeper (Characteristic of right minded thinking)

33) Breath shallow (left-minded)

34) Skin
- Processes more vitamin D (High amount of vitamin D created by melanin)

34) Poor processor of vitamin D

35) Calcium
- Intake lower (High amount of Vitamin D created by melanin stabilizes calcium, reduces need for high intake)

35) High Calcium intake required

36) Sternoclavicular muscle

36) Found abundantly

Anatomy

(Physical Difference Between the Alkebulan and Caucasian People)

Alkebulan

- Allows mobility for swinging from tree limb to another similar to monkeys - - rare

37) Pores of skin
- Widen with age

38) Muscle
- Quick twitch, highly responsive to stimuli, fast action, light in color, low in salt content.

Caucasian

37) No charge

38) Slow twitch, less responsive slow in action, dark in color, high salt content.
